DIGITAL LITERACY PROJECT REPORT

Name: Goranshi Aga
Registration Numbe
25BAI11505
Branch: B.Tech. CSE
Year: 1st Year
Course Code: CSE00

Goranshi Agarwal

Introduction:

In today's world, almost everything we do is connected to the internet, which makes digital literacy an essential skill for students. This project was carried out as part of the Digital Literacy course, where I took on the role of a Student Digital Ambassador. The aim was to understand how to use digital tools properly and guide others in using them safely and responsibly.

Through this project, I explored different areas such as creating awareness about digital literacy, building a professional online presence, using online platforms for learning, writing professional emails, and understanding cybercrime risks. Each task gave me practical exposure and helped me connect theory with real-life applications. Overall, this project improved not only my technical understanding but also made me more aware of how to behave responsibly in the digital world.

Task 1: Digital Literacy Infographic:

For this task, I designed a digital literacy infographic using Canva. The infographic explains what digital literacy means, why safe internet practices are important, and introduces useful tools like Google Workspace and GitHub that students can use in their daily academic life. I tried to keep the design simple, with clear headings and easy-to-understand points so that anyone can quickly grasp the information.

My main goal was to create something that is both informative and visually appealing. I focused on using icons and short text so that the content does not feel overwhelming. This makes it easier to share with other students as a quick learning resource.

One difficulty I faced was deciding how to arrange all the information within a single page without making it look crowded. However, while working on this, I also found it interesting to experiment with design elements and learned how visuals can make information more engaging and effective.

Task 2: Digital Portfolio:

In this task, I created and improved my profiles on platforms like GitHub, LinkedIn, and Kaggle. These platforms play an important role in building a student's professional identity. GitHub is useful for showcasing coding projects, LinkedIn helps in networking and building connections, and Kaggle is great for learning data science and practicing skills.

I created a GitHub profile README where I added my basic details and what I aim to learn in the future. On LinkedIn, I updated my education section to reflect my current course and university. I also took screenshots of these profiles and added them to my repository as proof of work.

Going forward, I plan to actively use these platforms to upload projects, participate in competitions, and connect with professionals. This will help me build a strong portfolio over time. This task made me realize how important it is to maintain a professional presence online from the beginning of college.

Task 3: Coding & Collaboration Platforms

For this task I created an account on HackerRank and completed a beginner-level coding problem. This gave me a basic understanding of how coding platforms work and helped me improve my problem-solving skills. It also boosted my confidence as a beginner.

In addition, I created a Digital Literacy Awareness Quiz using Google Forms. The quiz includes five questions with a mix of multiple-choice and short-answer formats. I also checked the responses in Google Sheets, which helped me understand how data is collected and analyzed.

These tools are very useful for students. Coding platforms help in improving programming skills, while tools like Google Forms are helpful for conducting quizzes, surveys, and collecting feedback. This task gave me hands-on experience with platforms that I will continue using throughout my academic journey.

Task 4: Email Etiquette & Social Media

In this task, I learned how to write professional emails and communicate effectively online. I drafted two emails—one to request an assignment extension and another to apply for an internship. While writing these, I focused

on maintaining a proper structure, using polite language, and including clear subject lines and sign-offs.

I also created a checklist of Do's and Don'ts for responsible social media use. This helped me understand how our online behavior can affect our image and future opportunities.

For example, sending an email without a subject line or using informal language can leave a bad impression. Such mistakes can easily be avoided by following basic email etiquette. This task helped me understand the importance of professionalism in digital communication.

Task 5: Cybercrime Awareness

In this task, I explored topics related to cybercrime, especially phishing and UPI fraud. I created a case study explaining how these scams usually happen and who is most likely to be targeted. I also made a prevention checklist with simple and practical safety tips for students.

One thing that really surprised me was how easily people can become victims of cybercrime due to lack of awareness. Even small actions like clicking on unknown links or sharing OTPs can lead to serious consequences.

After completing this task, I feel more aware and cautious while using online platforms. I will make sure to verify links, avoid sharing personal information, and stay alert while making online transactions. This task made me more responsible as a digital user.

Conclusion

This project helped me understand the importance of digital literacy in a practical way. I learned how to use digital tools effectively, communicate professionally, and stay safe online. Each task added something valuable to my knowledge and skills.

Overall, this experience has made me more confident and responsible while using digital platforms. The skills I gained will not only help me during my college life but also in my future career. I will continue to apply these learnings and improve my digital presence over time.
